# Statistics

**In 2015:**

## United States

- 15 million cancer survivors

## Iowa

- 140,000+ cancer survivors
- 6,00+ people will die annually
- 17,000+ newly diagnosed
- 40-100% sexual dysfunction

## **A manifesto on the preservation of sexual function in women and girls with cancer**

Stacy Tessler Lindau, MD, MAPP; Emily M. Abramsohn, MPH; Amber C. Matthews, BA

# Most females with cancer have a cancer that directly affects the sexual organs

	2012 Prevalence	Percent of all cancers in females	
Breast	2,990,813		40.9
Uterus	621,612	64.9 % of cancers in females directly affect the sexual organs	8.5
Colorectal	589,028		8.1
Cervix	249,512		3.4
Ovary	192,446		2.6
Brain	70,762		1.0
Anus	(2011) 26,298		0.4

2012 prevalence data from Surveillance, Epidemiology, and End Results (SEER) data, accessed 8/29/15. All sites, female, 2012 = 7,311,722

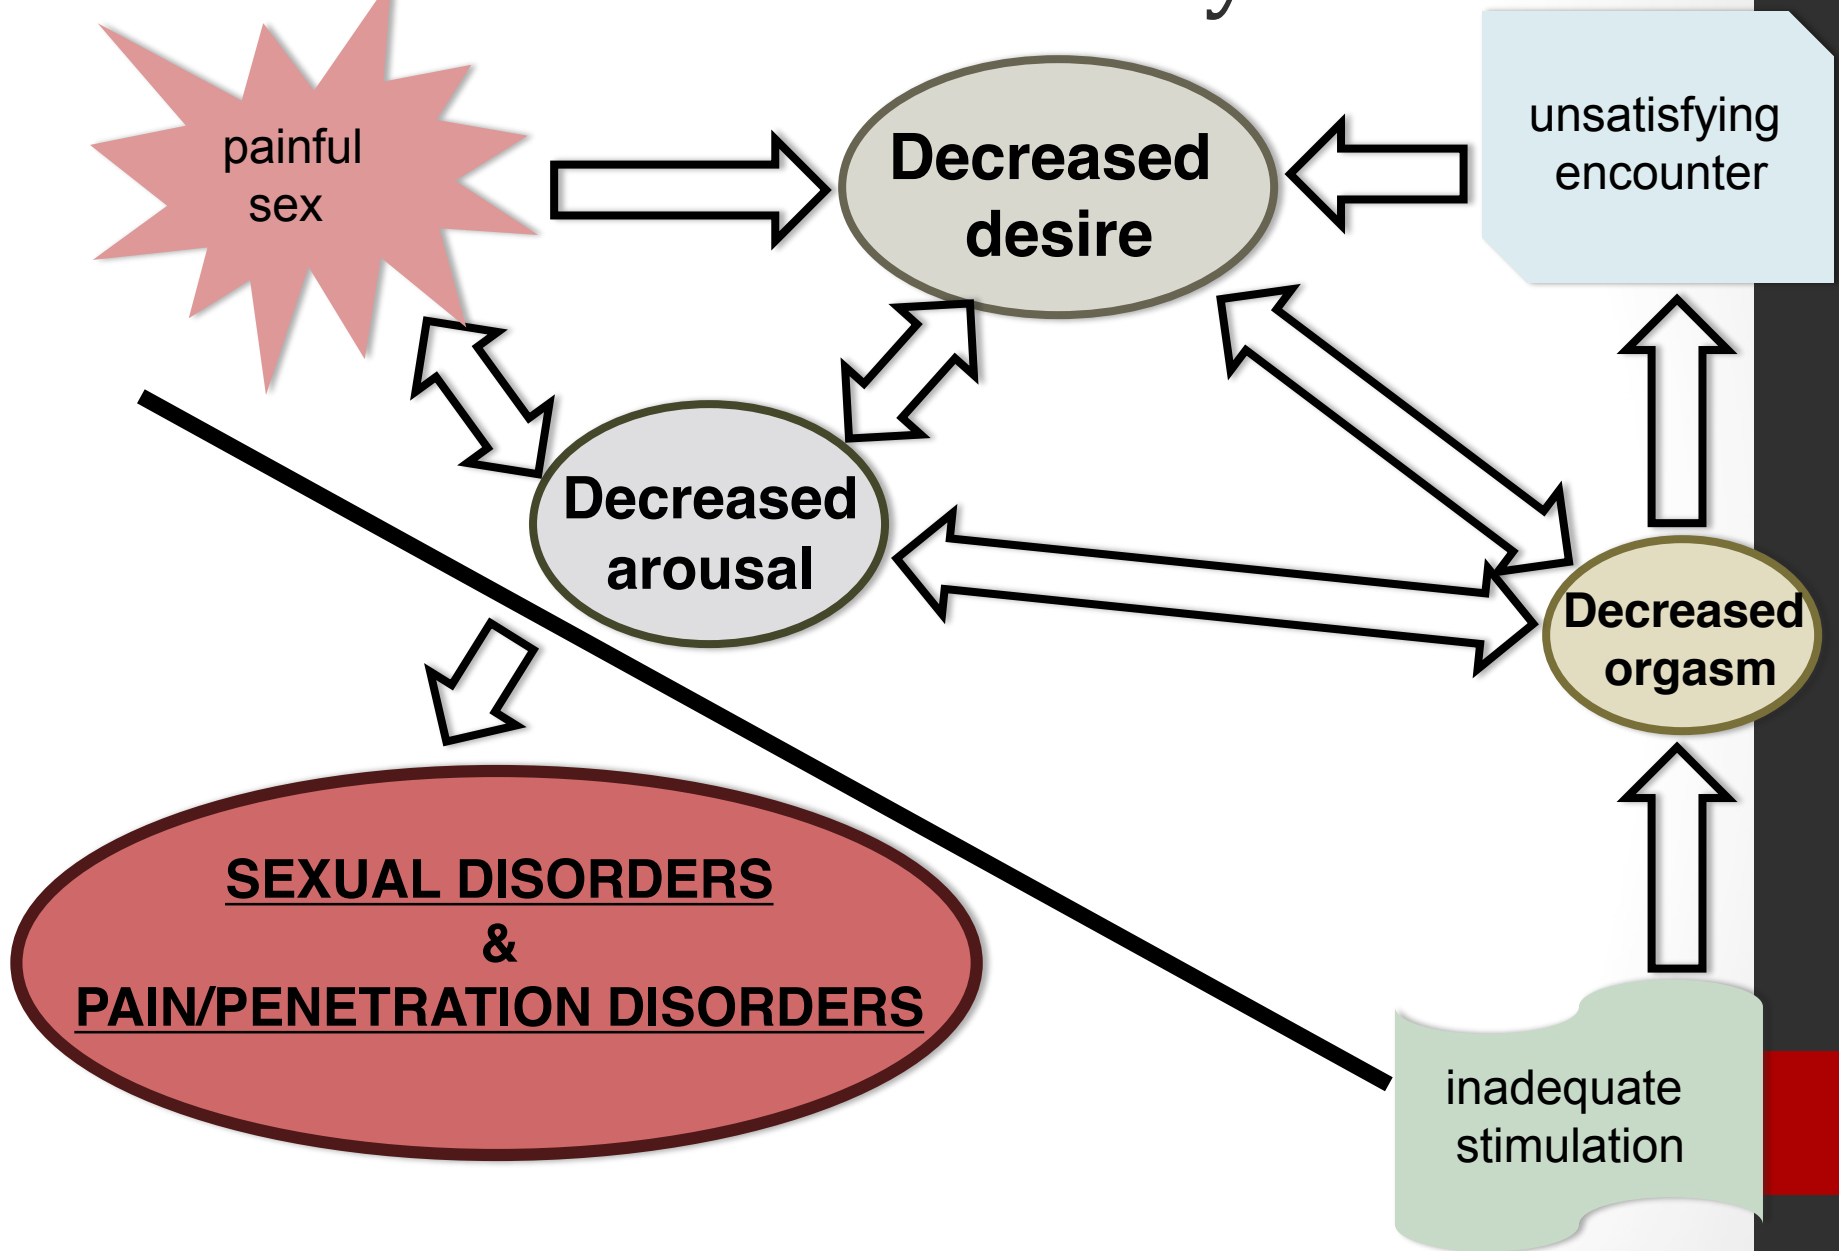

# Cancer and cancer treatment can impair female sexuality

Cancer Site	Most Common Sexual Problems	Prevalence
<b>Breast</b>		
	Overall	30-100%
	Desire	23-64%
	Arousal/lubrication	20-48%
	Orgasm	16-36%
	Pain/dyspareunia	35-38%
	Body image concerns	30-67%
	Poor nipple sensation	>90%
<b>Gynecologic</b> (ovarian & cervical only)		
	Overall	≤80%
<b>Colorectal</b>		
	Overall	6-60%

## DIAGNOSTIC EVALUATION

- Ask about sexual function at regular intervals
- Use the Brief Sexual Symptom Checklist as a primary screening tool<sup>a</sup>
- Review present and past level of sexual activity and discuss the potential impact of therapy. Discuss any sexual concerns and how cancer treatment has affected sexual functioning and intimacy
- Discuss treatment-associated infertility if indicated, with appropriate referrals

No concerns for sexual dysfunction

Reevaluate at subsequent visits/posttherapy

Concerns for sexual dysfunction

- H&P
  - ▶ Sexual history (including prior problems)
  - ▶ Past medical, surgical, and obstetric histories (nononcologic)
    - ◊ Identify traditional risk factors (eg, cardiovascular disease, diabetes mellitus, smoking, alcoholism, obesity, menopause)
  - ▶ Psychosocial history
    - ◊ Including relationship status/issues, drug and alcohol use
    - ◊ Screen for psychosocial concerns (See SANXDE-1\* and NCCN Clinical Practice Guidelines in Oncology [NCCN Guidelines] for Distress Management<sup>†</sup>)
      - ※ Depression
      - ※ Anxiety
      - ※ Relationship issues
  - ▶ Review oncologic history
    - ◊ Diagnosis/stage
    - ◊ Surgeries
    - ◊ Systemic treatment
    - ◊ Local RT
  - ▶ Use of prescription and over-the-counter medications (especially hormone therapy or opioids)

See Additional Evaluation and Treatment (p.2)  
Appropriate referrals for psychotherapy, sexual/couples counseling, or gynecologic care

## DIAGNOSTIC EVALUATION

- Ask about sexual function at regular intervals

sexual/couples  
counseling, or  
gynecologic care

# Brief Sexual Symptom Checklist

## BRIEF SEXUAL SYMPTOM CHECKLIST FOR WOMEN<sup>1</sup>

Please answer the following questions about your overall sexual function:

1. Are you satisfied with your sexual function?

☐ Yes ☐ No

If no, please continue.

2. How long have you been dissatisfied with your sexual function?

3a. The problem(s) with your sexual function is:

(mark one or more)

☐ 1 Problem with little or no interest in sex

☐ 2 Problem with decreased genital sensation (feeling)

☐ 3 Problem with decreased vaginal lubrication (dryness)

☐ 4 Problem reaching orgasm

☐ 5 Problem with pain during sex

☐ 6 Other:

3b. Which problem is most bothersome? (circle)

1 2 3 4 5 6

4. Would you like to talk about it with your doctor?

☐ Yes ☐ No

## DIAGNOSTIC EVALUATION

- Ask about sexual function at regular intervals
- Use the Brief Sexual Symptom Checklist as a primary screening tool<sup>a</sup>
- Review present and past level of sexual activity and discuss the potential impact of therapy. Discuss any sexual concerns and how cancer treatment has affected sexual functioning and intimacy
- Discuss treatment-associated infertility if indicated, with appropriate referrals

No concerns for sexual dysfunction

Appropriate referrals for psychotherapy, sexual/couples counseling, or gynecologic care

## **SANXDE-1**

### **ANXIETY AND DEPRESSION SCREENING**

- Do you feel nervous, or do you worry?
- Do you worry that your cancer will recur?
- Do you have trouble controlling your worry?
- Do you have trouble sleeping? (eg, staying asleep, falling asleep, too much sleep)b
- Do you have difficulty concentrating?
- Do you have less interest or enjoyment in activities?
- Do you feel sad or depressed?
- Are you having difficulty performing daily activities because of these (above mentioned) feelings or problems?

## SCREENING TOOLS FOR MEASURING DISTRESS

Instructions: First, please circle the number (0-10) that best describes how much distress you have been experiencing in the past week, including today.

Second, please indicate if any of the following has been a problem for you in the past week, including today. Be sure to check YES or NO for each.

Extreme distress

No distress

YES	NO	<u>Practical Problems</u>	YES	NO	<u>Physical Problems</u>
<input type="checkbox"/>	<input type="checkbox"/>	Child care	<input type="checkbox"/>	<input type="checkbox"/>	Appearance
<input type="checkbox"/>	<input type="checkbox"/>	Housing	<input type="checkbox"/>	<input type="checkbox"/>	Bathing/dressing
<input type="checkbox"/>	<input type="checkbox"/>	Insurance	<input type="checkbox"/>	<input type="checkbox"/>	Breathing
<input type="checkbox"/>	<input type="checkbox"/>	Transportation	<input type="checkbox"/>	<input type="checkbox"/>	Changes in urination

## ADDITIONAL EVALUATION

## TREATMENT

## POSTTREATMENT EVALUATION

- Evaluate for the following categories of female sexual dysfunctions:
  - Sexual desire disorder
  - Sexual arousal disorder
  - Female orgasm disorder
  - Sexual pain disorder
- Discuss concerns related to specific cancer therapies
- If treatment-related menopause, assess symptoms and effects on sexual functioning
- Perform physical and gynecologic exam to note points of tenderness, vaginal atrophy, and anatomic changes associated with cancer surgeries and treatments
- For more in-depth evaluation of sexual dysfunction, consider the Female Sexual Function Index (FSFI)<sup>b</sup>

- Guide treatment to specific type of female sexual dysfunction:
  - Use of water-, oil-, or silicone-based lubricants and moisturizers
  - Vaginal dilators/vibrators
  - Relaxation techniques or exercises
    - ◊ Pelvic physical therapy helpful for anatomical changes and dyspareunia
  - Topical estrogen therapy if not contraindicated by tumor type (with education regarding risks)
    - ◊ Base the type of local estrogen on exam findings and patient preference (pills, vaginal rings, creams)
- Encourage ongoing partner communication
- Identify sources for psychosocial dysfunction with appropriate referrals for psychotherapy or sexual/couples counseling

Use the Brief Sexual Symptom Checklist<sup>a</sup>

Concerns for sexual dysfunction improved or resolved

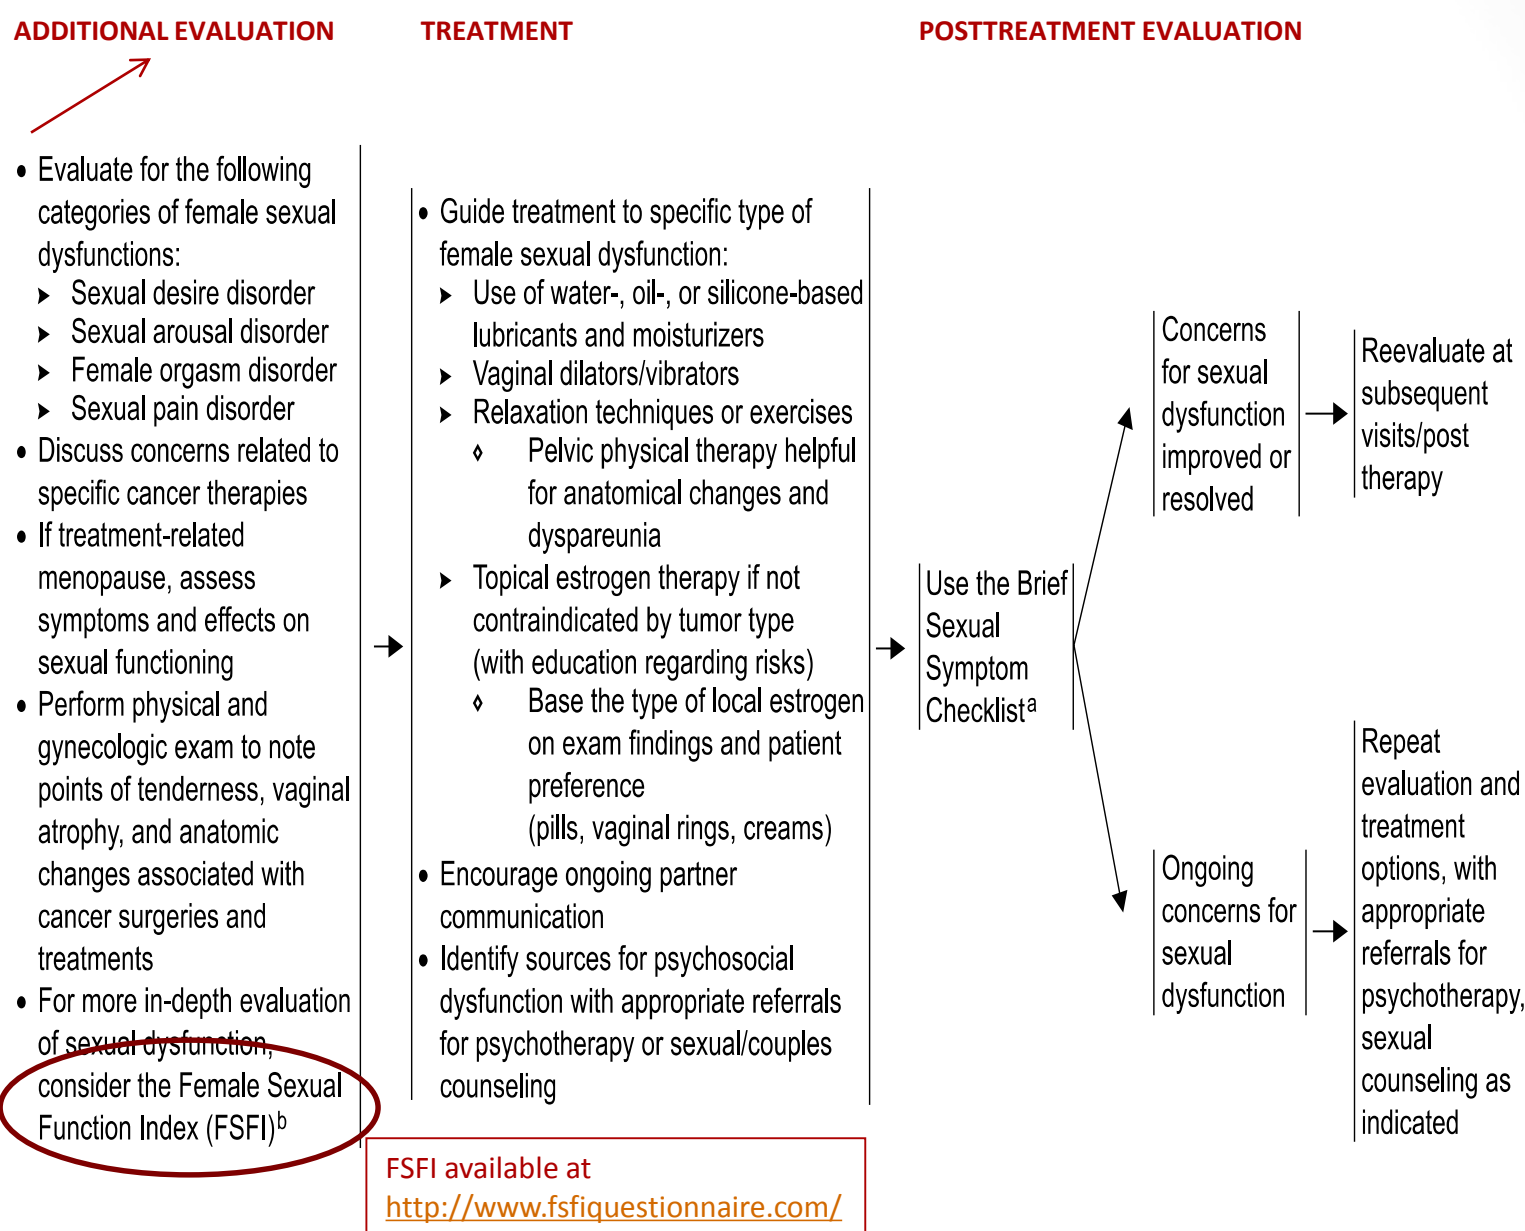

Reevaluate at subsequent visits/post therapy

Ongoing concerns for sexual dysfunction

Repeat evaluation and treatment options, with appropriate referrals for psychotherapy, sexual counseling as indicated

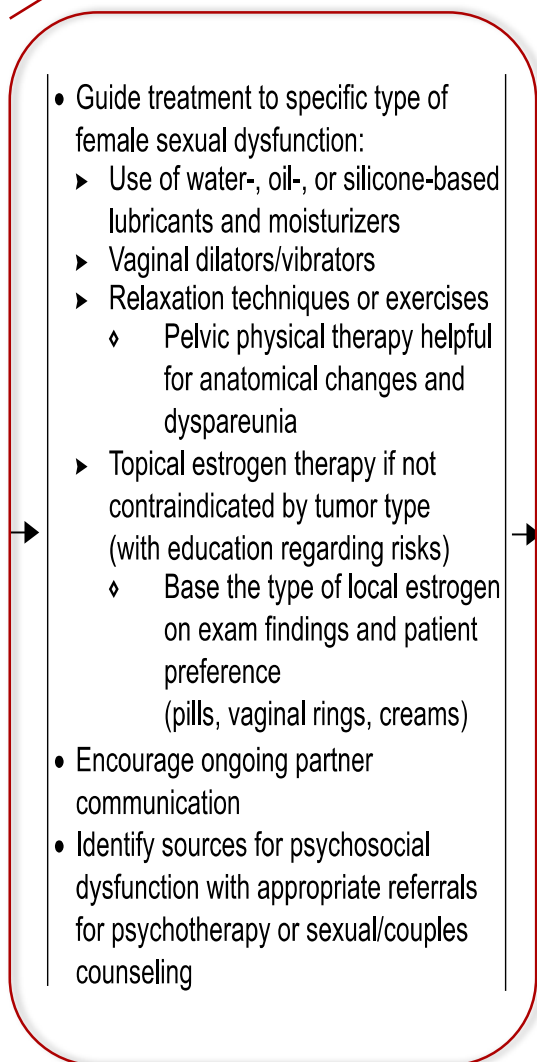

## ADDITIONAL EVALUATION

# Cancer Survivorship

- Bradley A. Erickson, MD
- 

## Pre-operative discussion

- Any oncologic intervention in the pelvis can lead to both short-term and long-term post-treatment sexual and urological side effects.
  - Radiation – delayed
  - Surgery – immediate
- Pre-intervention discussion generally involves discussion of cancer treatment.
- Pre-intervention sexual/urologic sequelae are rarely discussed.

## Typical Prostate Cancer Patient

58 M, diagnosed with prostate cancer after undergoing prostate biopsy for elevated PSA (6.5). Biopsy showed Gleason 3+4 Prostate cancer in 3 of 12 cores. Decision to undergo robotic assisted laparoscopic prostatectomy

# Prostate Cancer Risk

Eur J Surg Onc. 2014 Jul 18

# Prostate Cancer Treatment

- All men undergoing radical retropubic prostatectomy will experience SOME post-operative erectile dysfunction and stress incontinence
- Recovery can take YEARS
- Many men are misinformed or misunderstand

# Misinformed Patients

## Patient Preoperative Expectations of Urinary, Bowel, Hormonal and Sexual Functioning Do Not Match Actual Outcomes 1 Year After Radical Prostatectomy

Daniela Wittmann,\* Chang He, Michael Coelho, Brent Hollenbeck, James E. Montie and David P. Wood, Jr.†

*From the Department of Urology (DW, CH, MC, BH, JEM, DPW) and Department of Social Work–Center for Sexual Health (DW), University of Michigan, Ann Arbor, Michigan*

- **12% of patients expected BETTER urinary control**
- **17% of patients expected IMPROVED erections**

## Surgical Treatment

- Discussion of “sparing” or “not-sparing” nerves can often lead to increased expectations of post-operative recovery.
- While “nerve-sparing” approaches increase chances of recovery, it should never be “expected”.

# Post-Operative Rehabilitation

Post-op Rehabilitation should begin before surgery.

Good to understand keys to recovering urinary control and erections post-operatively:

- Urinary control - Kegel Exercises
- Erections - Kegel Exercises, +/- PDE-5 (e.g. Viagra) and/or Vacuum erection devices

Rehab after Knee Replacement

Penile Rehab after Prostatectomy

Urinary Sphincter Rehab after Prostatectomy

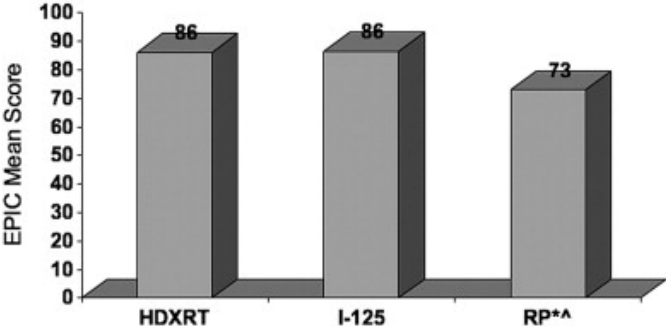

# Post-Operative Regret

- Regret is common (>20% of men)
- Most influenced by post-operative erectile dysfunction and incontinence
- More common in men undergoing robotic surgery
  - Expectations are higher?
  - Marketing?

# Health Related Quality of Life – Post-Treatment

Urinary Incontinence

Bowel Function

Sexual Function

# Multidisciplinary Approach to Survivorship

## **The effects of multidisciplinary rehabilitation: RePCa—a randomised study among primary prostate cancer patients**

K B Dieperink<sup>\*1</sup>, C Johansen<sup>2</sup>, S Hansen<sup>1</sup>, L Wagner<sup>3</sup>, K K Andersen<sup>4</sup>, L R Minet<sup>5</sup> and O Hansen<sup>1</sup>

Conclusion: Multidisciplinary rehabilitation in irradiated PCa patients improved urinary and hormonal symptoms, and SF-12 physical QoL.

# What can nursing do? – Call to action...

- Be the patient advocate
- Provide information
- Pre-operative counseling and early referrals
  - Post-operative/chemo sexual function is not a “complication” its an expectation

# What about the Partner?

## Survivorship After Prostate Cancer Treatment: Spouses' Quality of Life at 36 Months

Janet Harden, PhD, RN, Martin G. Sanda, MD, John Thomas Wei, MD, Hossein N. Yarandi, PhD, Larry Hembroff, PhD, Jill Hardy, BA, and Laurel Northouse, PhD, RN

**Conclusions:** Spouses continued to experience negative appraisal of caregiving, which affected QOL 36 months after their husbands' treatment for prostate cancer. Additional studies related to factors that influence spouse QOL during survivorship will help guide clinical practice.

**Knowledge Translation:** Spouses who experienced more bother related to urinary, sexual, and hormonal function experience more stress and worse QOL at 36 months post-treatment. Spouse appraisal can have a significant effect on QOL. Offering counseling to couples following treatment for prostate cancer may improve QOL by helping couples manage relationship intimacy.

# Conclusions

- Prostate Cancer treatment is very successful at managing prostate cancer with high cancer specific survival
- With prolonged survival after CAP treatment, survivorship issues specific to CAP (e.g. ED and incontinence) become more important
- Perioperative counseling focuses on the cancer
- Rehabilitation can help, but ED and incontinence are COMMON and UNDERREPORTED/APPRECIATED
- A team approach that begins pre-op is ideal
- It STARTS WITH NURSES!!!!

# Points To Remember

- Sexual health issues are common as a result of many cancer treatments
- Patients want medical teams to address this topic, set expectations and provide resources
- Treatment can impact the outcome if addressed early
- Sexual health issues=Medical issues=Quality of life issues
- Loss of Sexual functioning has consequences on intimate relationships
- There are resources to address issues for providers and patients ([www.aftercancer.co](http://www.aftercancer.co))
- Patients need your help, guidance and support

# Addressing Sexual Health Issues with Patients

## Q&A
